

# METROLL STANDING SEAM ROOFING & CLADDING

Standing Seam cladding systems have been around for many years. Metroll offer a system with a traditional aesthetic to avoid the industrial look of others.

Metroll Standing Seam Roofing & Cladding incorporates panels that lap each other which are then sealed with a specialised tool.

The versatility of this product offers a vast scope for application and design.

## metroll architectural collection

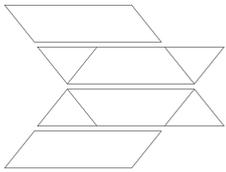

The Metroll Architectural Collection is a range of innovative and contemporary Roofing & Walling products. The many options for application provides limitless scope for design; and the quick and easy installation saves costs and time. The collection includes Metal Weatherboards, Interlocking Cladding, Standing Seam and Nailstrip Roofing & Cladding.

# METROLL STANDING SEAM ROOFING & CLADDING

## Installation

Standing Seam panels are lapped, fixed with steel clips and crimped securely together with a specialised tool.

## Fixing

### Roofing & Walling Installation Requirements:

Installation on 19mm structural plywood to AS2269 with breathable, waterproof membrane. Each panel is secured with concealed stainless steel clips placed at 300mm centres. Panels have a male and female rib, the female rib is held in place by a clip; the male rib is placed over the top of the female rib and crimped to create the standing seam.

**Oil Canning** is the looseness which can develop in the flat pan of cold formed metal products and which can affect the aesthetic of the finished installation. It is not a structural defect. Oil Canning is caused by many factors, various measures applied during product installation can mitigate the risks. Oil Canning can occur with any colour finish, but is generally more evident with darker colours. Metroll recommend designers take this into consideration.
